

Shandong Zhuoxing Chemical Co., Ltd.
Zibo Zhuoxing Enterprises Co., Ltd.

High Water Reducer Series Acid Water Reducer

Application

1.It is suitable for precast and cast-in-place concrete, reinforced concrete and prestressed concrete in various industrial and civil construction, water conservancy and transportation, high-speed railway and municipal engineering construction.

Can make up high strength and high impermeability, self-compacting concrete and flow grouting materials and used in all kinds of commercial concrete mixing station.

performance

Concrete performance is excellent. Fresh concrete workability is good, hardening and durability is excellent.

Wide adaptability to Portland cement, ordinary Portland cement, slag Portland, fly ash cement, pozzolanic cement and various admixtures have a wide range of adaptability.

High Water Reducer Series Acid Water Reducer has the advantages of high dispersion, good collapse protection, low shrinkage rate of concrete, strong adjustable molecular structure, etc. In addition, polycarboxylic acid superplasticizer does not use formaldehyde in the production process and other outstanding advantages, in line with the needs of modern society to promote green environmental protection

Method of use

1, the use of mixing amount (by weight) for cementitious material dosage of 0.5% ~ 1.2%

2, this product shall not be mixed with naphthalene system water-reducing agent, when used with other admixtures (such as retarder, rust inhibitor, etc.) at the same time, concrete compatibility test should be carried out in advance.

3, curing: after the final setting of concrete should immediately begin to cover and moisturizing maintenance.

Surface protection measures should be taken in winter construction to prevent freezing damage on concrete surface.

Should be stored at room temperature (below 40°C) in a dry environment, avoid stacked or heavy pressure, so as to avoid the product caking.

As a new generation of superplasticizer for high performance concrete, polycarboxylate superplasticizer undoubtedly has outstanding advantages and strong vitality.

But any new things also have its two sides, only good at sending its advantages, improve its shortcomings, the correct understanding of the application of it to achieve the greatest effect.

In the future, it will be a long way to further research on the production and application technology of polycarboxylate superplasticizer.
